

SIMATS ENGINEERING

MCQ Test

COURSE NAME: Software Testing

COURSE CODE: CSA37

COURSE OUTCOME COVERED

CO1: *Apply software testing principles to enhance the effectiveness of software quality assurance and improve defect detection strategies.*

Assessment Tool Weightage: 20%

Sl. No	MCQ Questions	Bloom's Level
1	A team applies systematic test design techniques during development. This reflects: A) Debugging B) Testing as an engineering activity C) Maintenance D) Deployment Answer: B) Testing as an engineering activity	3
2	If a project skips defined testing processes, what is the likely outcome? A) Faster delivery with high quality B) Increased defects in production C) Reduced testing cost only D) Improved documentation Answer: B) Increased defects in production	3
3	Selecting test cases based on requirements demonstrates: A) Random testing B) Process-driven testing	3

	C) Ad hoc testing D) Maintenance testing Answer: B) Process-driven testing	
4	Applying equivalence partitioning is an example of: A) Debugging B) Test design technique C) Coding standard D) Deployment activity Answer: B) Test design technique	3
5	A tester identifies missing requirements during testing. This shows: A) Coding error B) Process gap C) User error D) Hardware issue Answer: B) Process gap	3
6	Following a structured testing lifecycle ensures: A) Random defect detection B) Improved software quality C) Less documentation D) No defects Answer: B) Improved software quality	3
7	Which activity best represents testing as a process? A) Writing code B) Executing test cases systematically C) Deploying software	3

	D) User training Answer: B) Executing test cases systematically	
8	A tester reuses test cases from a repository. This supports: A) Efficiency in testing B) Increased coding errors C) Reduced coverage D) Random testing Answer: A) Efficiency in testing	3
9	If defects are tracked and analyzed, it improves: A) Coding speed B) Software quality process C) Deployment time D) User interface Answer: B) Software quality process	3
10	Applying boundary value analysis helps to: A) Increase documentation B) Detect edge-case defects C) Reduce execution time D) Avoid testing Answer: B) Detect edge-case defects	3
11	A tester validates system behavior against requirements. This is: A) Verification B) Validation C) Debugging D) Coding	3

	Answer: B) Validation	
12	Detecting defects before release reduces: A) Development effort B) Maintenance cost C) Coding standards D) Testing scope Answer: B) Maintenance cost	3
13	Applying testing principles ensures: A) Zero defects guarantee B) Early defect detection C) No testing needed D) Faster coding Answer: B) Early defect detection	3
14	Which principle suggests testing all inputs is impossible? A) Exhaustive testing B) Exhaustive testing is impossible C) Early testing D) Defect clustering Answer: B) Exhaustive testing is impossible	3
15	A tester focuses on frequently failing modules. This uses: A) Random testing B) Defect clustering principle C) Regression testing D) Smoke testing	3

	Answer: B) Defect clustering principle	
16	If testing starts early in SDLC, it helps: A) Reduce defects cost B) Increase coding errors C) Delay project D) Skip documentation Answer: A) Reduce defects cost	3
17	A tester designs test cases independently from developers. This ensures: A) Bias B) Objectivity C) Delay D) Redundancy Answer: B) Objectivity	3
18	A tester reviews requirements for errors. Role performed is: A) Developer B) Tester C) Manager D) User Answer: B) Tester	3
19	Reporting defects clearly is part of: A) Coding B) Tester's responsibility C) Deployment D) Maintenance	3

	Answer: B) Tester's responsibility	
20	A tester collaborates with developers to fix bugs. This shows: A) Isolation B) Teamwork C) Delay D) Redundancy Answer: B) Teamwork	3
21	A requirement ambiguity causes defects. Origin is: A) Coding B) Requirements phase C) Testing phase D) Deployment Answer: B) Requirements phase	3
22	Incorrect algorithm implementation leads to: A) Requirement defect B) Design defect C) Coding defect D) Testing defect Answer: C) Coding defect	3
23	Missing validation checks are example of: A) Design defects B) Coding defects C) Requirement defects D) Deployment defects	3

	Answer: B) Coding defects	
24	Poor UI design causing confusion is: A) Coding defect B) Design defect C) Requirement defect D) Hardware defect Answer: B) Design defect	3
25	A system crash due to memory leak is: A) Requirement defect B) Coding defect C) Design defect D) Documentation defect Answer: B) Coding defect	3
26	Classifying defects based on severity helps: A) Ignore defects B) Prioritize fixing C) Delay release D) Increase cost Answer: B) Prioritize fixing	3
27	A critical defect impacts: A) Minor feature B) Core functionality C) UI color D) Documentation	3

	Answer: B) Core functionality	
28	A minor defect example is: A) System crash B) Login failure C) Typo error D) Data loss Answer: C) Typo error	3
29	Defect classification helps testers to: A) Ignore bugs B) Organize defects C) Skip testing D) Increase errors Answer: B) Organize defects	3
30	A defect repository is used to: A) Store code B) Store test cases C) Store defect details D) Store UI designs Answer: C) Store defect details	3
31	Reusing defect data helps in: A) Predicting issues B) Increasing bugs C) Reducing tests D) Skipping phases	3

	Answer: A) Predicting issues	
32	A defect repository improves: A) Code complexity B) Testing efficiency C) User interface D) Deployment speed Answer: B) Testing efficiency	3
33	Logging defects with details ensures: A) Confusion B) Traceability C) Delay D) Redundancy Answer: B) Traceability	3
34	A tester uses past defect data to design tests. This is: A) Random testing B) Experience-based testing C) Debugging D) Deployment Answer: B) Experience-based testing	3
35	Incorrect login validation is an example of: A) Functional defect B) Performance defect C) Security defect D) UI defect	3

	Answer: A) Functional defect	
36	Slow response time is a: A) Functional defect B) Performance defect C) UI defect D) Coding standard Answer: B) Performance defect	3
37	Unauthorized data access indicates: A) UI defect B) Security defect C) Functional defect D) Design defect Answer: B) Security defect	3
38	Missing button functionality is: A) Functional defect B) Security defect C) Performance defect D) Hardware defect Answer: A) Functional defect	3
39	Poor alignment in UI is: A) Functional defect B) UI defect C) Security defect D) Design defect	3

	Answer: B) UI defect	
40	Applying testing principles avoids: A) Coding B) Redundant tests C) Deployment D) Maintenance Answer: B) Redundant tests	3
41	A tester validates outputs using expected results. This is: A) Debugging B) Test execution C) Coding D) Maintenance Answer: B) Test execution	3
42	If defects are not tracked, it leads to: A) Better quality B) Poor traceability C) Faster delivery D) No impact Answer: B) Poor traceability	3
43	Applying test process ensures: A) Random results B) Structured testing C) No defects D) No planning	3

	Answer: B) Structured testing	
44	Test case design based on requirements ensures: A) Low coverage B) High coverage C) No defects D) Less effort Answer: B) High coverage	3
45	Early testing reduces: A) Defect cost B) Code size C) UI design D) Deployment time Answer: A) Defect cost	3
46	A tester identifies repeated defects. This indicates: A) Good design B) Poor process C) No issue D) Perfect testing Answer: B) Poor process	3
47	Reviewing test results helps: A) Ignore defects B) Improve quality C) Skip testing D) Reduce effort	3

	Answer: B) Improve quality	
48	A tester applies regression testing to: A) Add features B) Ensure fixes work C) Deploy software D) Design UI Answer: B) Ensure fixes work	3
49	Identifying root cause of defects helps: A) Increase bugs B) Prevent recurrence C) Delay testing D) Skip coding Answer: B) Prevent recurrence	3
50	A test plan ensures: A) Random execution B) Organized testing C) No testing D) No defects Answer: B) Organized testing	3
51	Applying defect classification improves: A) Testing cost B) Fix prioritization C) Coding errors D) UI design	3

	Answer: B) Fix prioritization	
52	A tester uses historical defect trends. This helps in: A) Ignoring defects B) Risk-based testing C) Deployment D) Coding Answer: B) Risk-based testing	3
53	Testing ensures product meets: A) Developer needs B) User requirements C) Tester goals D) Manager plans Answer: B) User requirements	3
54	A defect due to wrong requirement interpretation is: A) Coding defect B) Requirement defect C) UI defect D) Hardware defect Answer: B) Requirement defect	3
55	Applying process standards ensures: A) Poor quality B) Consistent quality C) No testing D) Random output	3

	Answer: B) Consistent quality	
56	A tester documents defects clearly. This helps: A) Developers fix quickly B) Increase errors C) Delay release D) Reduce quality Answer: A) Developers fix quickly	3
57	A defect repository is analyzed to: A) Increase cost B) Improve testing strategy C) Skip testing D) Reduce quality Answer: B) Improve testing strategy	3
58	A tester applies black-box testing. This focuses on: A) Internal code B) External behavior C) Hardware D) Deployment Answer: B) External behavior	3
59	Defects found in testing phase indicate: A) Perfect design B) Earlier phase issues C) No issues D) Hardware problems	3

	Answer: B) Earlier phase issues	
60	Applying structured testing improves: A) Random results B) Product reliability C) Coding errors D) Deployment delay Answer: B) Product reliability	3

Code of Conduct:

*I **Mugesh S (192411055)** certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.*

I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student: *S. Mugesh.*

RUBRICS FOR CALCULATION:

Criteria	Weight age (%)	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Conceptual Understanding	30%	Demonstrates thorough understanding; answers all questions accurately	Shows good understanding with few errors	Partial understanding; several incorrect responses	Lacks understanding; majority of answers incorrect
Accuracy of Answers	25%	All answers are correct	Most answers are correct with minor mistakes	Some correct answers; frequent errors	Mostly incorrect answers
Application of Knowledge	20%	Correctly applies concepts to problem-based questions	Applies concepts with minor errors	Limited ability to apply concepts	Unable to apply concepts
Time Management	15%	Completes quiz well within time efficiently	Completes on time with minor delays	Requires extra time or rushes through questions	Unable to complete within given time
Question Interpretation	10%	Interprets all questions correctly and responds appropriately	Misinterprets a few questions	Often misinterprets questions	Unable to understand questions
